

Essential Productivity:

- 1}. **Live Server** — It instantly launches a local dev server with live reload for HTML/CSS/JS.
- 2}. **Prettier** — Automatically formats code on save [supports JS/TS/HTML/CSS/JSON].

Version Control:

- 3}. **GitLens** — Supercharges Git with inline blame, commit history and code authorship tracking.
- 4}. **GitHub Copilot {AI-Powered}** — AI pair programmer that suggests code snippets in real time.

Language Support:

- 5}. **ESLint** — Catches JavaScript/TypeScript errors and enforces code style.
- 6}. **Python {Microsoft}** — Essential for Python devs [debugging, linting, IntelliSense].

Debugging & Testing:

- 7}. **REST Client** — It sends HTTP requests directly from vs code [alternative to Postman].
- 8}. **Docker** — Manage containers, images and Dockerfiles without leaving the editor.

UI & Navigation:

- 9}. **Bracket Pair Colorizer** — It color-matches brackets for better readability in nested code.
- 10}. **TabNine {AI Autocomplete}** — AI-powered code completions beyond Copilot [supports 20+ languages].

Bonus Extension:

- 11}. **Remote SSH** — Allows you to edit code on a remote server as if it were local.
